Traffic Analysis Zone 2045 Projections

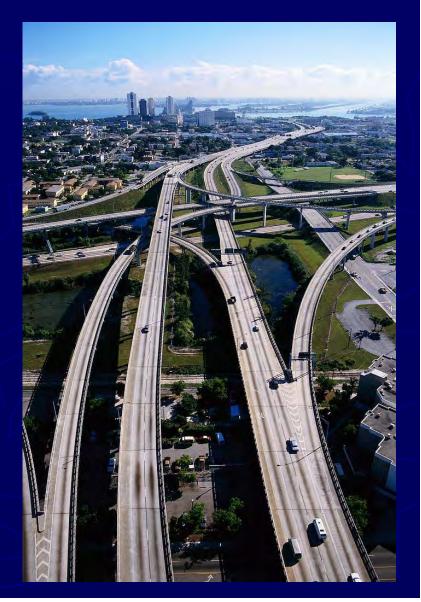

Greater Hickory Metropolitan Planning Organization

Greater Hickory MPO TAC and TCC Meetings December 14, 2016

What is a Traffic Analysis Zone (TAZ)?

A TAZ is a group of census blocks that has at least one major thoroughfare going through it or touching the zone boundary that can used for transportation modeling and other purposes. Data is collected on population/ housing and employment for the traffic demand model.

TAZ Methodology-2045 Population/Housing Projections

Meetings were held with planning staff throughout the region to determine 2045 housing/population projections.

Total population numbers are checked with projections from the North Carolina Office of Management and Budget for reasonableness.

TAZ Methodology-2045 Employment Data Collection

Meetings were held with planning staff throughout the region to determine 2045 employment projections.

2045 employment projections are crosschecked with 2045 population projections for reasonableness.

TAZ Methodology-Additional Data Collection

Along with the transition of the Hickory MPO to a Transportation Management Area (TMA), additional data projections are required to more accurately complete the transportation modeling process.

WPCOG staff made the projections when data was available. If no data was available, then the data was kept the same as the 2015 estimate.

TAZ Methodology-Additional Data Collection

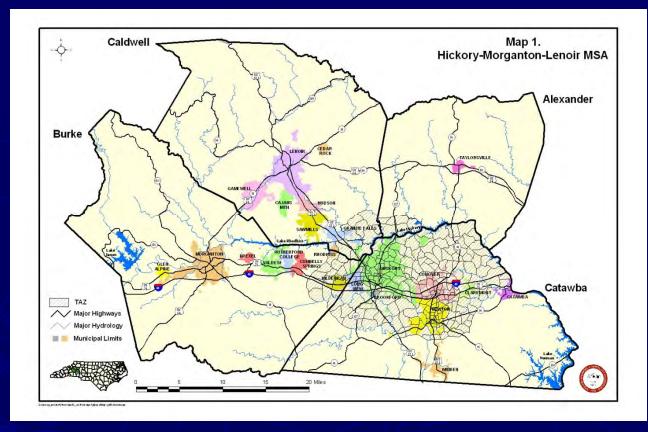

- Employed Persons per Household (Projection same as 2015 estimate)
- Median Household Income (Projected growth based on trend between 2000 Census and 2010-2014 ACS by county)
- Vehicles per Household (Projection same as 2015 estimate)
- K-12 Enrollments (Public, Private and Charter Schools) and Lenoir-Rhyne/Community College Enrollments (Projection based on 5-17 growth rate by county from the NC Office of State Planning)

TAZ Methodology-Additional Data Collection

- Special Employment Generators (Large Employers) (Projection based on input during planning meetings
- Central Business District Determination (Same as 2015 estimate)

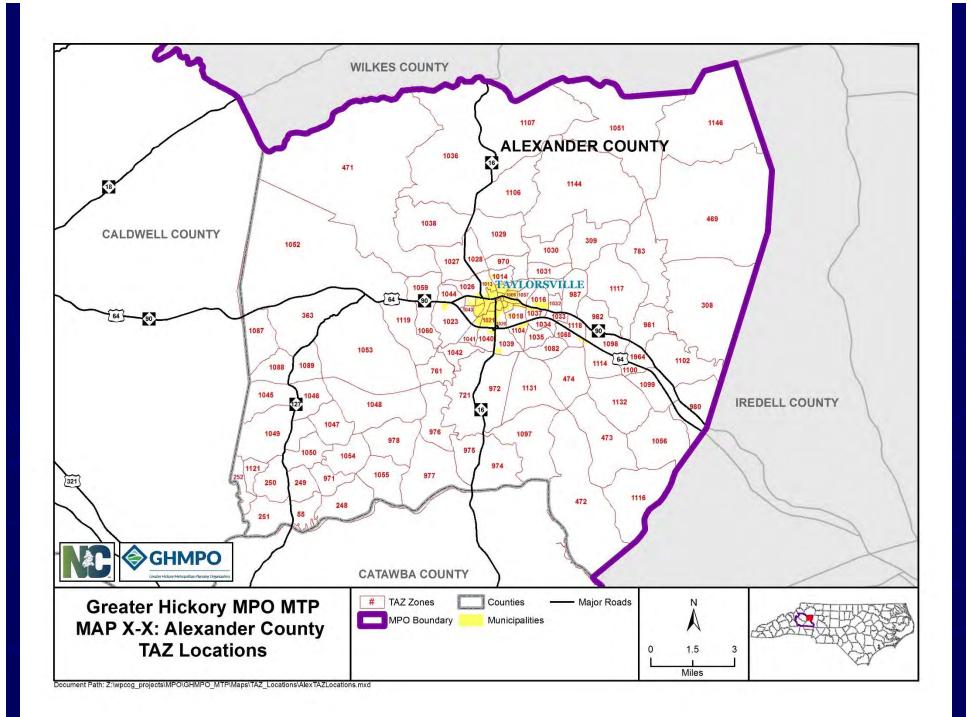

Walkability Index (Some zones increased walkability index score from 1 [little walkability] to 2 [some walkability] in urban areas if more than 100 units were projected added to the TAZ between 2015 and 2045)

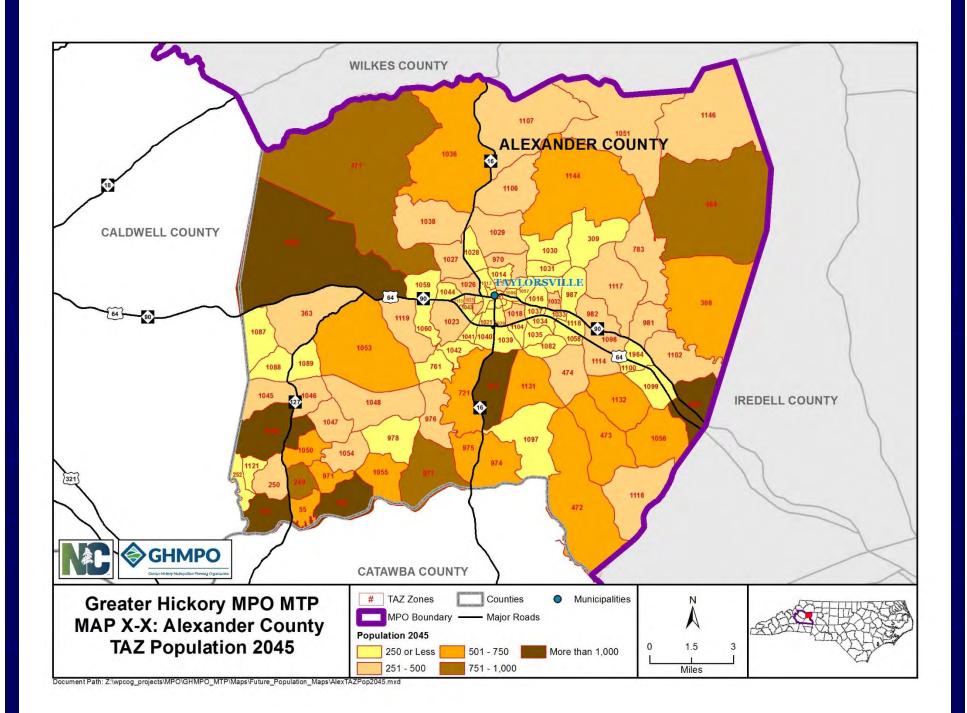

Original Traffic Analysis Zones (TAZ) for the Hickory-Newton-Conover MPO (286 Zones in 1984)

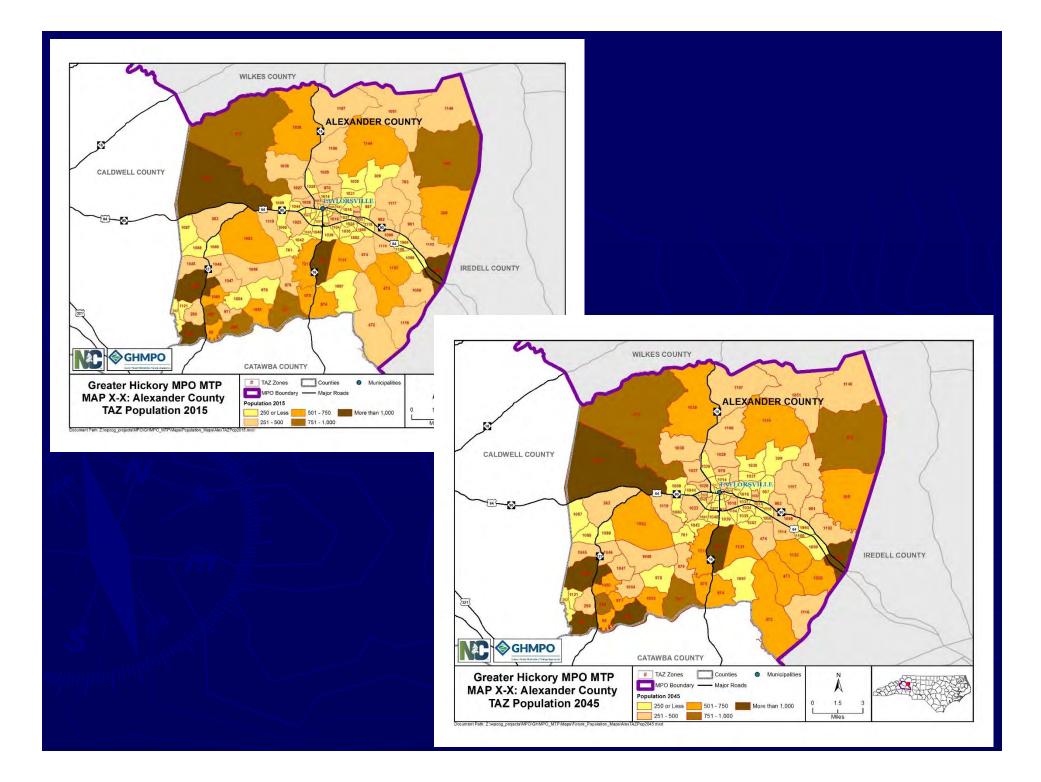

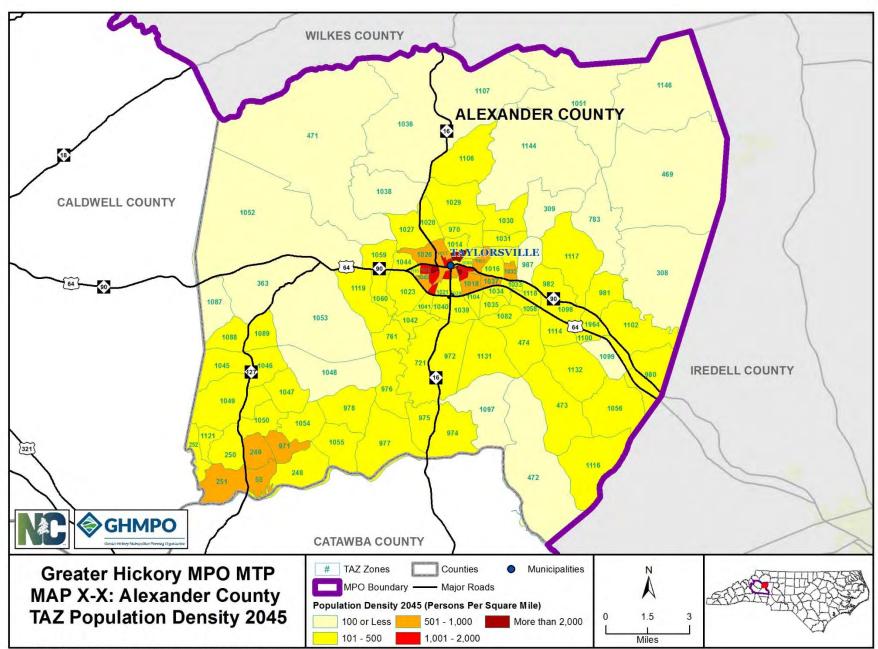

As of 2015 there are 1,131 TAZ Zones in the Greater Hickory MPO covering the entire four county region. Calculating projections for additional TAZs made the process more difficult than in years past.
